

The development and the competitiveness of the territories also depend on the ability of people, bodies, institutions and economic operators to exploit "ethically" all available resources, to build relations with other territories, by trying to find common responses to common problems, by combining and exchanging experience and good practice, by exploiting synergies. In this perspective Sviluppo Basilicata works with the regional, local and other public authorities to design and implement intervention policies in the fields of local business competitiveness system and socio-economic development of local and regional communities, by implementing national and local Community programmes.
